

Symbol Creator AI Instructions

1. Sign in to Global Symbols

- Go to <https://app.globalsymbols.com/en/>
 - Sign in with your account (or create one if needed).
-

2. Home Page Overview

You can choose between two main options:

Create Boards

- Start a communication board
- Add cells with labels and images
- Symbols you create go straight into the board

Design Symbols

- Create a symbol to download or save
- Store it in your personal symbol library

Both options allow you to download, save, remove backgrounds, and edit symbols later.

3. How to Create a Symbol

1. Describe the Symbol (Prompt Text)

- Write a short 3–6 word description in English.
- Be clear about what you want (e.g., “fried egg on plate”).
- Include details like skin tone, hair colour, action, animal or object type.
- You do **not** need to mention style, size, or format.
 - Symbols are automatically set at 512×512px .png format.

2. Choose a Symbol Set Style

- Click the arrow to open the style list.
- Pick one of the available open-licensed symbol sets.

3. Choose a Culture

- Add some text a cultural or ethnic style (e.g., Asian, Kurdish) to influence the appearance.

4. Generate Symbols

- Click **Generate Images**.
- Wait for the four images to appear—this may take time.
- If the system is busy, you may be asked to try again.

5. Choose and Save a Symbol

- Select your preferred image.
- Use **Remove Background** if needed (you can undo it).
- Save your symbol:
 - To a board cell (if using Board Builder), or
 - To your image library
- You can also:
 - Download the image
 - Edit it further using Symbol Designer (spanner and hammer icon)

Rate the Symbol – this is very important for system improvements

- Give 1–5 stars (where 5 is good) for:
 - Overall look then
 - How well it matches your prompt
 - How well it matches the symbol style

You can close the pop-up or generate more symbols.

6. Troubleshooting

Prompt Issues

- Repeating the same prompt may reduce quality.
 - Change settings, refresh the page, or try a new prompt.
 - A simple prompt often works best.

Slow Image Loading

- The server may be busy or your internet may be slow.

Shadows or Patchy Areas

- Background removal may struggle with detailed images.
 - Try removing the background again using tools like **remove.bg**. <https://www.remove.bg/>
-
